

## Dr. Jay Jagannathan

Imagine waking up every day with severe back pain, and never finding relief. Then imagine a life where you're able to go whitewater rafting without discomfort. According to patient Sindy Fuller, this is exactly what she experienced after undergoing surgery performed by Dr. Jay Jagannathan. "I'm 61 years old and feel better than I have in many years. I've resumed all the activities I used to do," says Fuller, who works out regularly and has even enjoyed riding on zip lines without pain or discomfort.

Like Fuller, more than 1,500 patients have found relief from neurosurgeon Dr. Jagannathan, who was educated and trained at the University of Virginia and Wayne State University. He has been named a 'Rising Star' in spine surgery by #In-Spine# magazine, and is a recipient of both the Synthes Award for Craniofacial Research and the Pevehouse Award in socioeconomic research from the American Association of Neurological Surgeons. Although Dr. Jagannathan could go anywhere with his talents, he decided to stay

in Michigan, where his practice takes him across the state; he has offices across metro Detroit, as well as in northern and western Michigan.

"My goal is to give patients the information they need to seek treatment that results in a better quality of life," Dr. Jagannathan says. That could mean having minimally invasive surgery or spinal injections; in some cases, it's possible to provide lasting freedom from pain without surgery or anesthesia. "I understand that for most patients, surgery is a last resort," he adds.

When surgery is necessary, Dr. Jagannathan has had excellent results with disk replacement, lumbar and cervical fusions, and cutting-edge procedures such as endoscopic and image-guided cranial surgery.

Now that neurologist Dr. Fadi Delly has joined the staff, comprehensive neurology services are also available, including the diagnosis and treatment of disorders like EMGs, stroke, Parkinson's, Alzheimer's, MS, brain dysfunction due to strokes, and concussions.

Visiting a neurosurgeon or neurologist can be intimidating for some, but the experienced staff at the Jagannathan Neurosurgical Institute strives to make consultations as comforting as possible with prompt attention to patient concerns and state-of-the-art techniques that result in quicker recovery. "A team-oriented, empathetic approach to patient care, along with outstanding outcomes, are the paramount goals of this practice," Dr. Jagannathan says. "We won't keep you waiting. When you're in pain, you want to get the best care possible, quickly." ■
